Disparity at national level

Comparison of median annualised earnings: males vs. female one / three / five years after graduation

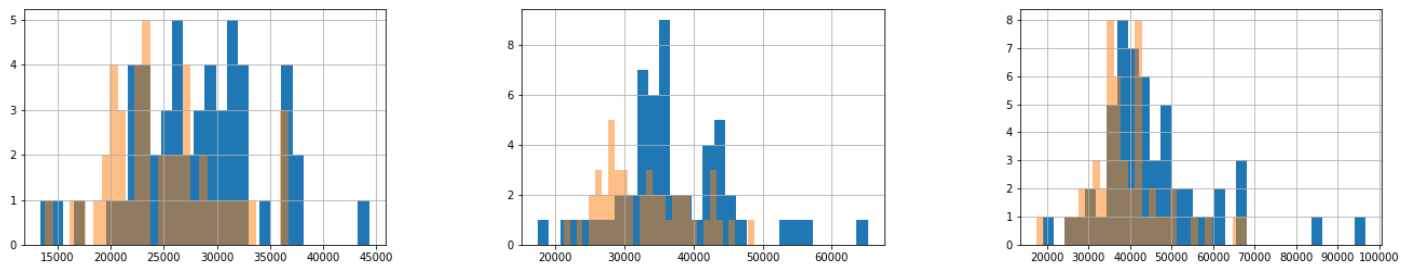

Sources: UK Department for Education

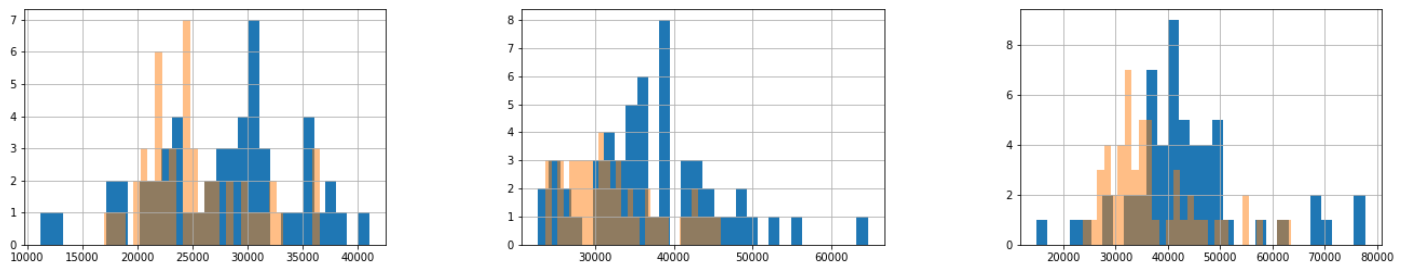

Disparity among graduates from top universities

Comparison of median annualised earnings between male and female graduates one, three, five years after graduation from top five UK universities based on World University Rankings 2019.

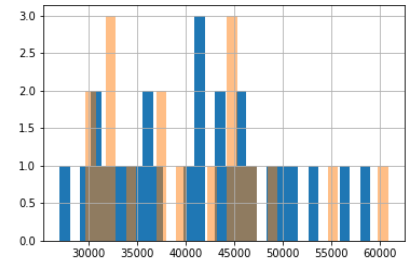

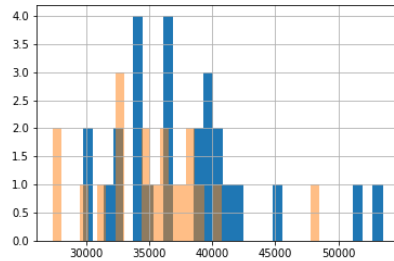

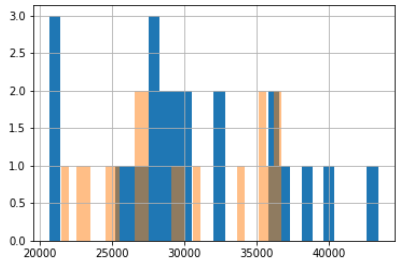

The University of Oxford

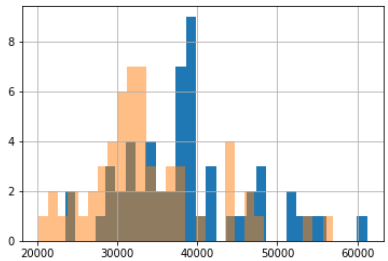

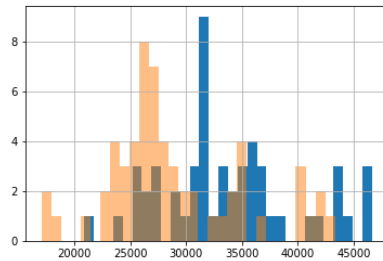

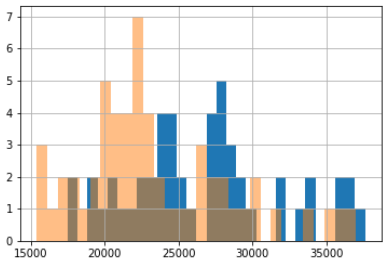

The University of Cambridge

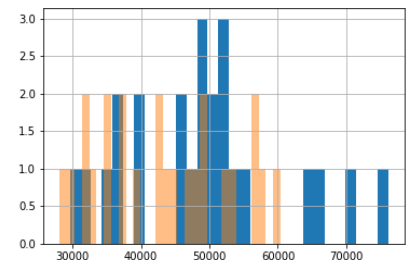

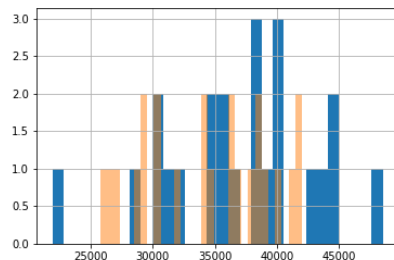

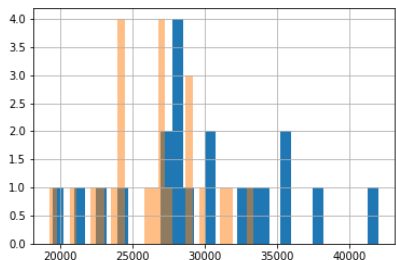

Imperial College of Science, Technology and Medicine

University College London

London School of Economics and Political Science

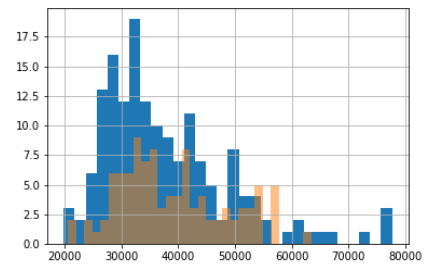

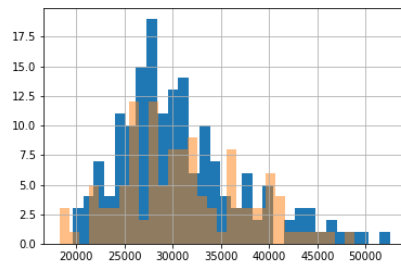

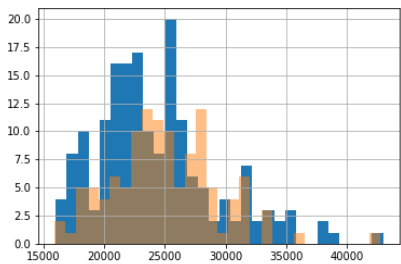

Sources: UK Department for Education

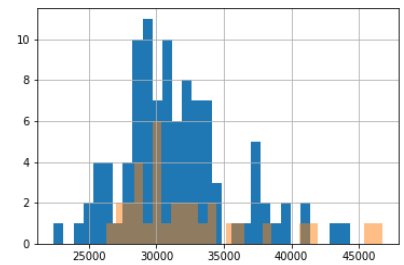

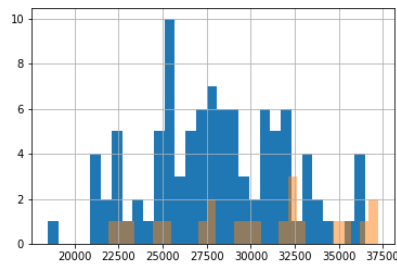

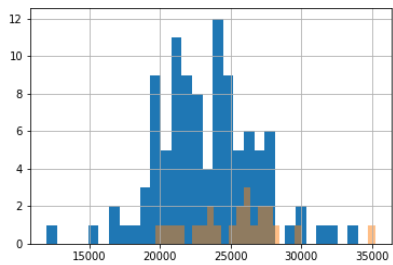

Disparity among graduates by subjects

In only three out of 34 subjects they study during university, female university graduates are earning a slightly higher median income than their male counterparts five years after graduation:

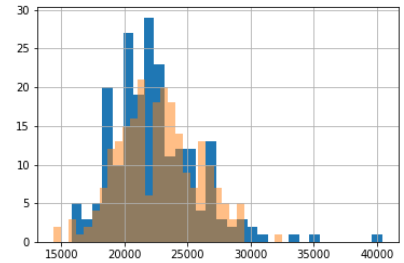

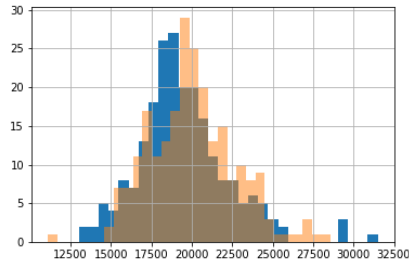

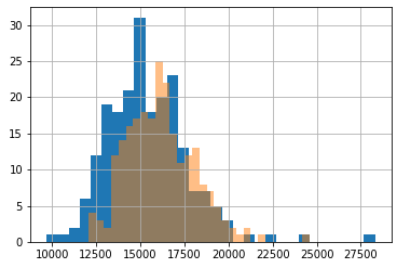

Economics

Physics and astronomy

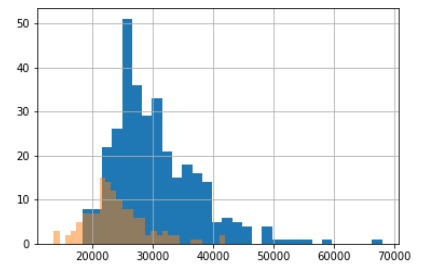

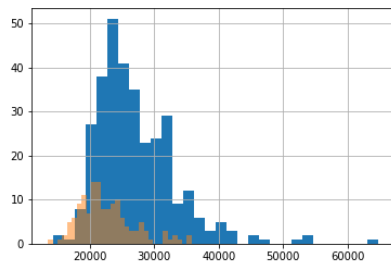

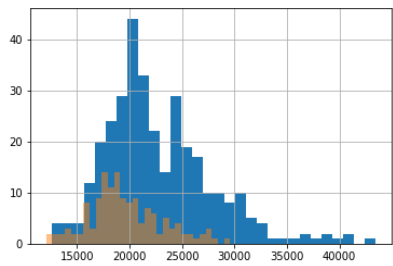

Communications and media

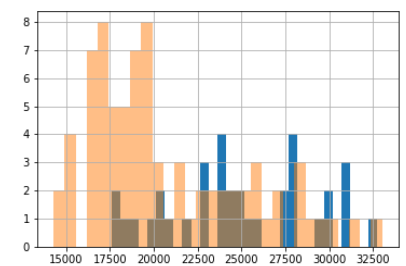

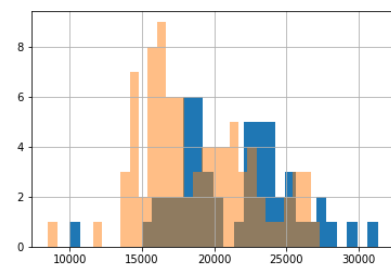

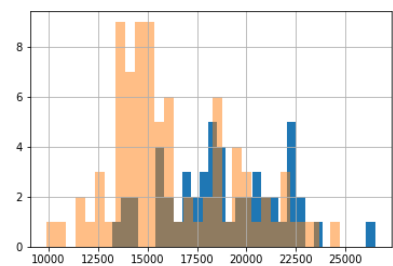

The difference is especially obvious in the following areas:

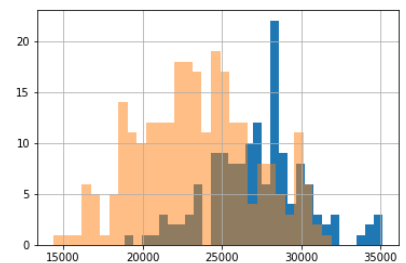

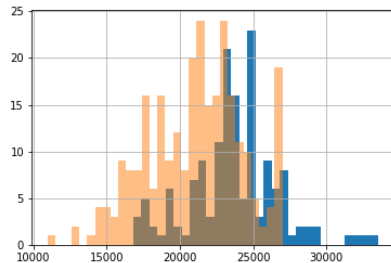

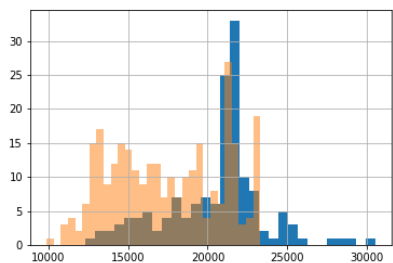

Computing

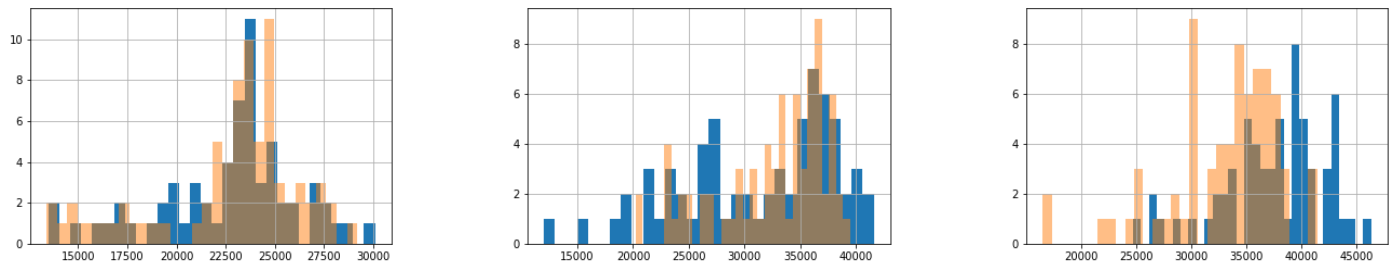

Agriculture, food and related studies

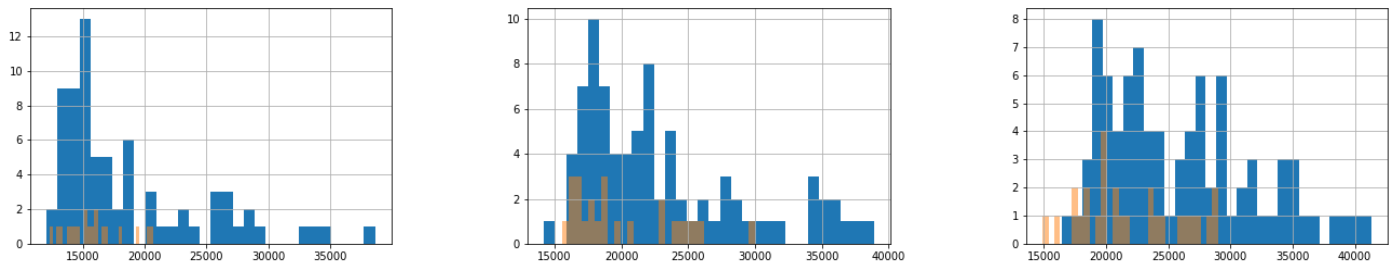

Education and teaching

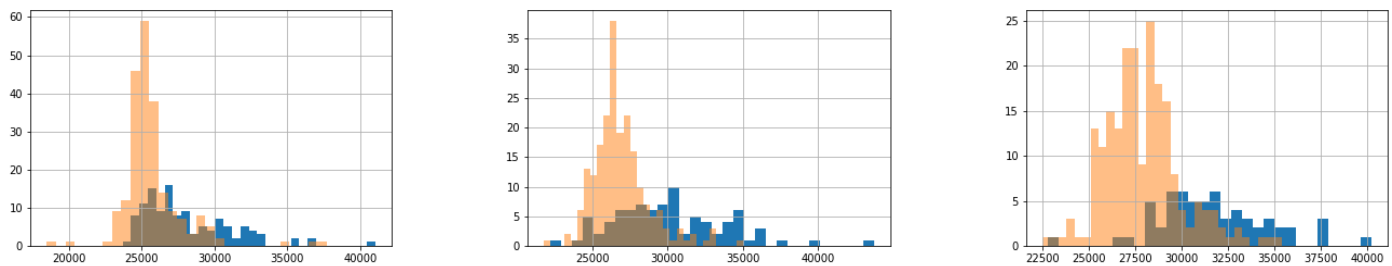

Pharmacology, toxicology and pharmacy

Technology

Even in nursing, an industry that hires 10 times more women than men, the male graduates are earning a substantially larger paycheck:

Sources: UK Department for Education. Note that there is no income data for male graduates who did Celtic studies.
